# Implicit Feedback

	Anna	Berta	Claudia	Dagmar
The Shawshank Redemption	1		1	
The Godfather		1	1	
The Godfather: Part II		1		1
Pulp Fiction	1	1		1
The Good, the Bad and the Ugly	1		1	

# Item Prediction Task

	Anna	Berta	Claudia	Dagmar
The Shawshank Redemption	1		1	?
The Godfather		1	1	?
The Godfather: Part II		1		1
Pulp Fiction	1	1		1
The Good, the Bad and the Ugly	1		1	?

# Notation

	Anna	Berta	Claudia	Dagmar
The Shawshank Redemption	1		1	
The Godfather		1	1	
The Godfather: Part II		1		1
Pulp Fiction	1	1		1
The Good, the Bad and the Ugly	1		1	

Items

Users

Interactions

Basket of  $u$

# Leave-one-out Protocol

- 1 Randomly choose one interaction per user and hide them
- 2 Train the recommender system with the remaining interactions
- 3 Get recommendations for every user
- 4 Compute the chosen evaluation metric with the hidden items and the recommendations

# Hitrate/Recall@N [Karypis(2001), Sarwar et al.(2000) Sarwar, Karypis, Konstan, and Riedl]

$$\text{Recall@N} = \frac{\sum_{u \in U} |H_u \cap \text{topN}_u|}{|H|} \quad (1)$$

$H$  hidden interactions

$H_u$  the hidden interaction of  $u$

$U$  set of users

$\text{topN}_u$  N recommendations for  $u$

# Precision [Sarwar et al.(2000)Sarwar, Karypis, Konstan, and

$$\text{Precision} = \frac{\sum_{u \in U} |H_u \cap \text{top}N_u|}{N \times |U|} \quad (2)$$

$H$  hidden interactions

$H_u$  the hidden interaction of  $u$

$U$  set of users

$\text{top}N_u$   $N$  recommendations for  $u$

## F1 [Sarwar et al.(2000) Sarwar, Karypis, Konstan, and Riedl]

$$F1 = \frac{2 \times \text{Recall@N} \times \text{Precision}}{\text{Recall@N} + \text{Precision}}. \quad (3)$$

$H$  hidden interactions

$H_u$  the hidden interaction of  $u$

$U$  set of users

$topN_u$   $N$  recommendations for  $u$

# Mean Reciprocal Hitrate [Ning and Karypis(2011)]

$$\text{MRHR} = \frac{1}{|U|} \sum_{u \in U} \frac{1}{\text{pos}(\text{topN}_u, H_u)}, \quad (4)$$

$H$  hidden interactions

$H_u$  the hidden interaction of  $u$

$U$  set of users

$\text{topN}_u$   $N$  recommendations for  $u$

$\text{pos}(\text{topN}_u, H_u)$  position of the hidden item in the list of recommendations

# Area under the ROC

(AUC) [Rendle et al.(2009)Rendle, Freudenthaler, Gantner,

$$\text{AUC} = \frac{1}{|U|} \sum_{u \in U} \frac{1}{|E(u)|} \sum_{(i,j) \in E(u)} \delta(x_{ui} > x_{uj}), \quad (5)$$

$$\delta(x) = \begin{cases} 1, & \text{if } x \text{ is true,} \\ 0, & \text{otherwise.} \end{cases} \quad (6)$$

$$E(u) = \{(i,j) | (u,i) \in H \wedge (u,j) \notin (H \cup T)\}. \quad (7)$$

$H$  hidden interactions

$H_u$  the hidden interaction of  $u$

$U$  set of users

$x_{ui}$  predicted score of the interaction between  $u$  and  $i$

# Contents

- 1 Background
  - Item Prediction Task and Implicit Feedback
  - Evaluation
  - Evaluation Metrics
- 2 Recommendation Algorithms
- 3 Recsyslab

# Non-Personalized

- Constant Recommend the most popular items
- Random Recommend randomly chosen items

# k-Nearest-Neighbor [Karypis(2001)]

- 1 Compute similarity of each item, item pair
- 2 For each item, save the  $k$  items with the highest similarity (= neighbors)
- 3 Compute the union of the neighbors of the basket of  $u$
- 4 For each item in this set compute the sum of similarities to the basket of  $u$
- 5 Sort by this score and return the first  $N$  items

$$\text{sim}(i, j) = \cos(\vec{i}, \vec{j}) = \frac{\vec{i} \cdot \vec{j}}{\|\vec{i}\|_2 \|\vec{j}\|_2} \quad (8)$$

## k-Nearest-Neighbor [Karypis(2001)]

	Anna	Berta	Claudia	Dagmar
The Shawshank Redemption	1	0	1	0
The Godfather	0	1	1	0
The Godfather: Part II	0	1	0	1
Pulp Fiction	1	1	0	1
The Good, the Bad and the Ugly	1	0	1	0

$$\text{sim}(i, j) = \cos(\vec{i}, \vec{j}) = \frac{\vec{i} \cdot \vec{j}}{\|\vec{i}\|_2 \|\vec{j}\|_2} = \frac{0}{2} = 0$$

## k-Nearest-Neighbor [Karypis(2001)]

	Anna	Berta	Claudia	Dagmar
The Shawshank Redemption	1	0	1	0
The Godfather	0	1	1	0
The Godfather: Part II	0	1	0	1
Pulp Fiction	1	1	0	1
The Good, the Bad and the Ugly	1	0	1	0

$$\text{sim}(i, j) = \cos(\vec{i}, \vec{j}) = \frac{\vec{i} \cdot \vec{j}}{\|\vec{i}\|_2 \|\vec{j}\|_2} = \frac{2}{\sqrt{2}\sqrt{3}}$$

# Matrix Factorization [mat(2013)]

	Anna	Berta	Claudia	Dagmar
The Shawshank Redemption	1	0	1	0
The Godfather	0	1	1	0
The Godfather: Part II	0	1	0	1
Pulp Fiction	1	1	0	1
The Good, the Bad and the Ugly	1	0	1	0

Find  $W$  and  $H$  so:  $\hat{M} = W H^T$ .

$$\text{Score}(u, i) = W_u I_i^T. \quad (9)$$

# Matrix Factorization, Training

```
U = randomly chosen user
I = randomly chosen item U interacted with
J = randomly chosen item U did not interact with

X=H[i] - H[j]
wx = dot product of W[u] and X
dloss = (derivative of the
         loss function of wx and 1) *
         learningRate

W[u] += dloss * (H[i] - H[j]) #These three lines
H[i] += dloss * W[u]          #have to be
H[j] += dloss * -W[u]         #executed at once
```
